EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with the applicant's representative, Mark Henry, on February 25, 2010.

The application has been amended as follows: Cancel claims 1, 2, 15, and 16.

Amend claim 3 to remove "of claim 1" from line 2.

Amend claim 3 to replace

a catalyst comprising at least one titanium compound and at least one phosphorus compound selected from the group consisting of phosphoric acid, phosphorous acid, a phosphorous ester and a phosphorus compound represented by the following formula (4):

wherein m is an integer of 1 or 2, and each R independently represents

, wherein n is an integer of from 0 to 3, wherein said at least one titanium compound and said at least one phosphorus compound are used in respective amounts such that the phosphorous/titanium atomic ratio is in the range of from 0.01 to 10, and a catalyst comprising at least one tin compound selected from the group consisting of metallic tin, tin oxide, tin sulfide, tin halide, tin carboxylate and tin alkoxide (pages 7-8) with "tin butyrate and tin 2-ethylhexanoate,".

Amend claim 9 to replace a catalyst comprising at least one titanium compound and at least one phosphorus compound selected from the group consisting of phosphoric acid, phosphorous acid, a phosphorous ester and a phosphorus compound

represented

by the following formula (4):

wherein m is an integer of 1 or 2, and each R independently represents

, wherein n is an integer of from 0 to 3, wherein said at least one titanium compound and said at least one phosphorus compound are used in respective amounts such that the phosphorous/titanium atomic ratio is in the range of from 0.01 to 10, and a catalyst comprising at least one tin compound selected from the group consisting of metallic tin, tin oxide, tin sulfide, tin halide, tin carboxylate and tin alkoxide (pages 11-12) with "tin butyrate and tin 2-ethylhexanoate,".

Amend claim 10 to replace a catalyst comprising at least one titanium compound and at least one phosphorus compound selected from the group consisting of phosphoric acid, phosphorous acid, a phosphorous ester and a phosphorus compound represented

by the following formula (4):

wherein m is an integer of 1 or 2, and each R independently represents

, wherein n is an integer of from 0 to 3, wherein said at least one titanium compound and said at least one phosphorus compound are used in respective amounts such that the phosphorous/titanium atomic ratio is in the range of from 0.01 to 10, and a catalyst comprising at least one tin compound selected from the group

consisting of metallic tin, tin oxide, tin sulfide, tin halide, tin carboxylate and tin alkoxide (page 16) with "tin butyrate and tin 2-ethylhexanoate,".

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Claims 3, 10, and 11 as amended are directed towards methods of producing polytrimethylene terephthalate with a reduced cyclic dimer content, and low cyclic dimer formation index, where the polycondensation reaction uses a tin butyrate or tin 2-ethylhexanoate catalyst. While tin catalysts are known polycondensation catalysts in polytrimethylene terephthalate resin production (See Doerr et al, U.S. 5,340,909 and Kelsey et al. US 2002/0009353), the prior art of record does not teach or suggest using these specific species of tin catalysts as polycondensation catalysts in a polytrimethylene terephthalate production method. As the catalysts known in the art are organotin or tin metal catalysts (Doerr et al. 4:35-42), a person having ordinary skill in the art at the time of invention would not be motivated to change to the claimed non-organotin catalyst without a teaching or suggestion from the prior art. Additionally, tin carboxylates are known in the producing aliphatic polyesters through a ring opening reaction (See e.g. Takada et al. (5,484,852). However, as the reaction mechanism in the ring opening reactions is distinct from the instant polyesters, a person having ordinary skill in the art at the time of invention would not have a reasonable expectation of success in using the catalysts in the claimed process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
